1. INTRODUCTION

During the summer months of 2000, the beach accesses along the coast from Ferndowne Road to Deep Bay (in Electoral Area ‘H’) were visited by Ian Carmichael, summer staff-person for the RDN Recreation and Parks Department. This report summarizes Ian’s findings. The “Access to Water” inventory was undertaken at the request of the Electoral Area ‘H’ representative on the Regional Board, Dick Quittenton.

Accesses to water (beach accesses as they are commonly known) fall within the jurisdiction of the Ministry of Transportation and Highways. This Ministry does not discourage public use of the accesses, however it does not actively manage and maintain them. The Ministry will consider granting the Regional District the ability to develop and manage beach accesses within the Community Parks function. (See Section 6 for more detail).

Each of the sites included in this report was visited, photographed, and assessed for its potential as a public beach access. The details of this site inventory are included in the body of this report.

Of the 49 sites visited, the inventory process indicates that up to ten (10) sites are worth consideration as being developed for public beach access, and an additional three (3) sites are possibly worth considering for development in the future. The remaining sites are either usable in their present state (without requiring the Regional District’s involvement), or have limitations (such as steep slopes, or are inaccessible). This does not preclude additional consideration being given if requested by the local community.

It is not the intent of this report to advocate public trespass over private property. Some of the beach accesses may be on unconstructed roads – denoting an access on the attached map does not give the right to trespass to reach inaccessible beach accesses.

In all cases, the first step in considering development of a beach access is to adequately consult neighbourhood residents as to the local need and demand for beach access development before attempting to acquire permission from the Ministry of Highways.
2. GLOSSARY

Terms used in the individual site descriptions and the text are described here.

ACCESS: Crown land that is designated as a road right way, park or Regional District of Nanaimo beach access site which presently or possibly in the future, could provide access to the shoreline or a viewpoint. Access may be for foot or vehicle traffic to the shoreline or viewpoint.

ARTERIAL ROAD: Local driving route to the access site.

ASPECT: Cardinal compass direction the majority of the beach area faces N, S, E, W.

BACKBEACH: Crown land between mean high tide and the highest storm tide line. This area is often covered with driftwood or beach grass and marsh vegetation.

BOULDERs: Large rounded rocks larger than 10” in diameter

BLUFF: Any bench of land within the backbeach area or immediately behind, that rises steeply more than one (1) meter above the upper shoreline level. Slopes are usually steep with grade percentages often above 50% up to 100% +.

COBBLE: Rounded beach material between 3” and 10” in diameter.

DEVELOPMENT STATUS

UNDEVELOPED: No useable access available, the right of way may be forest or brush covered, an inaccessible bluff slope or cliff.

PARTIALLY DEVELOPED: Sites where access is available and some development has occurred over time. The site will have any or all of the following conditions; rough, brushy or overly steep footpath; unstable or generally unsafe stair structures; rough, unleveled or unsatisfactory parking areas; existing or potential hazards.

FOOTPATH: A path providing foot access to a bluff edge (viewpoint) or backbeach area. The footpath development may range from a well-defined and marked path to a brush overgrown route that is poorly defined as to actual location.

FORESHORE: The area between mean tide line and lowest annual tide line.

HAZARDS: Any physical feature, activity, or situation, which presently or potentially could pose a safety threat to the general public. Hazards may include; cliffs, steep slopes, bluffs, rough footpath tread, ravines, unstable ground, danger trees, strong tidal or ocean currents, slippery rock or soil surfaces, parking locations and traffic proximity.

MIXED COARSE MATERIAL: A mixture of beach materials composed of cobbles (3”-10” diameter), gravel (1/4” – 3” diameter) and sand.

MIXED FINE MATERIAL: A mixture of gravel, sand and mud.

PARKING TYPE: Parking areas may be roadsides, road ends, highway shoulders, or developed parking areas (Lot). The term Parking Lot, in this instance refers to parking areas that are off the main road or highway.

ROCK: A mixture of cobbles and boulders.
3. ACCESS TO WATER ZONES

For this report the shoreline has been divided into six (6) separate zones. The criteria for determining zonal boundaries included: topography, areas of high bluffs, and population density. In the following zone descriptions, the site numbers in brackets refer to the same sites as described in the 1980 RDN “PUBLIC COASTAL BEACH ACCESS REPORT”.

ZONE #1:
Widgeon Road bluffs area including sites #1 – 10 (180 – 189).
Larkdowne Road to Mayser Road
This zone generally has high and unstable bluffs. Mayser Road site #10 has a lower bluff height. No road construction has been done to provide access to the backbeach areas. The land use is generally larger forest cover lots with low, dispersed population densities. The backbeach area is generally mixed coarse materials (sand and cobbles) and scattered boulder material. Travel along the beach areas at high tide will be greatly restricted due to thick, overhanging backbeach vegetation.

ZONE #2:
Lower bench area including sites #11 – 26 (190 – 204).
Alert Road to Noonday Road, which includes the Qualicum Bay area.
This area has a minimal bluff in the backbeach area and the Island Highway 19A is approximately level with the upper backbeach for most of it’s length. Many accesses administered by either Ministry of Transport and Highways (MoTH) or the Regional District of Nanaimo (RDN) are located within this zone and provide good access to the shoreline. The land use is generally smaller lot sizes with a higher population density. The backbeach areas have a higher percentage of fine sand and fewer cobbles, while the foreshore area is often mainly sand. Travel along the backbeach area is unrestricted by vegetation. Areas of restriction are main creeks or rivers crossing the beach, the Qualicum Indian Reserve and some areas of backbeach construction in Qualicum Bay.

ZONE #3:
McColl Bluffs / Island Highway including sites #27 – 30 (205 – 208)
At this time no roads provide access between the highway and the backbeach. This zone is a narrow strip of land between the Island Highway 19A and the backbeach. The area is composed of high bluffs with steep heavily vegetated slopes. Land use is generally larger lots with low dispersed population density. The beach areas are mixed coarse materials in the backbeach areas and cobbles in the foreshore. Tidal flats are located along portions of the foreshore area. No access to the backbeach exists at present, but excellent views of the Straits of Georgia and the out lying islands are available at the McColl Road site.
ZONE #4:
Bowser Road to Coburn Road including sites #31 – 33 (209 – 211)
This zone has bluffs ranging from very low to high with backbeach access from good to difficult.
The zone is centered around the Bowser community which is comprised of varying lot sizes and higher population density. Beaches are generally mixed coarse to mixed fine materials in the backbeach and mixed coarse and cobbles in the foreshore areas.

ZONE #5:
Lighthouse residential area from Henry Morgan Drive to the west end of Ocean Trail, including sites #34 – 41 (212 – 220).
This zone is comprised of mainly high bluffs with variable slope stability. The land use is mainly smaller lots and a high population density. Within the area there are 3 partially developed access sites that may be receiving regular use. Henry Morgan Drive #34 has a footpath providing access to the backbeach area. Buccaneer Beach Road #36, provides road access to the backbeach area. And Ocean Trail (east end) #40 which has an open area for a potential park, a footpath providing access down to the backbeach and a park area bordering the creek from the backbeach area up to the Esquimalt and Nanaimo Railway line. The backbeach and foreshore areas in this zone are generally mixed coarse materials with boulders in the foreshore area. Tidal flats are located along portions of this zone. Travel along some portions of the backbeach area will be restricted at high tide by thick vegetation. This area appears to have a high wildlife and bird population during parts of the year.

ZONE #6:
Deep Bay area from the east end of Shoreline Drive to Mapleguard Point including sites #42 – 49 (221 – 228).
The zone is a combination of three (3) separate sections. The first section is the southeastern area along Shoreline Drive. The smaller lots and higher population are located on the top of a bluff above the main beach access area. The middle, second, section has a high bluff restricting access to the shoreline, large lot sizes and dispersed population density. The third section, the Deep Bay area, has easy beach access, smaller lots, and higher population density. The backbeach areas are generally mixed fine materials and sand, with scattered areas of marsh grass. The foreshore areas are a mixture of mixed coarse material, scattered tidal flats and areas of mud (portions of Deep Bay).
4. SUGGESTED CRITERIA FOR ACCESS PERMIT APPLICATION

In prioritizing potential access sites for permit application by the Regional District, it is suggested that the following criteria be used.

- Community expressed need (now or for the near future).
- Community willingness to participate in initial construction and ongoing maintenance.
- Lack of alternative useable access sites in the immediate vicinity.
- Special location features not represented elsewhere i.e. landforms, activities or structures.
- Existing facilities or structures that pose a hazard, and if removed by MoTH would close or greatly restrict use of the site (stairs, boardwalks etc.).
- Minimal construction and facility maintenance costs.

5. POTENTIAL SITE ACQUISITIONS

ZONE #1: None. Considering the high bluff topography, potentially unstable slopes, and low population density, no sites are recommended for acquisition at this time.

ZONE #2: Two sites within this zone are presently administered by the RDN, (Sunnybeach Road and Franksea Road). Additional sites for consideration include Alert Road #11, Crane Road #23, Nile Road #24. These are all large sites with varying amounts of development already in place. In addition, they appear to be receiving regular use by the general public. They appear to be presently maintained by the Ministry of Transport and Highways.

ZONE #3: None. Future consideration could be given to the Shull Road site # 28 for constructing a footpath down the slope to provide access to this beach area. This stretch of beach is already accessible from the Noonday Road site to the south and the Bowser Road site to the north.

ZONE #4: None. Future consideration could be given to the Midland Road site #32. The Midland Road site would provide access to water for a different population area than is served by the adjacent Bowser Road site #30.

ZONE #5: Three sites in this zone warrant consideration for acquisition. The easterly site #34 at Morgan Henry Drive, The Buccaneer Beach Road site #36, and Ocean Trail (east end) #40 all have extensive development in place. Considering the high population density in this area, the aesthetic and physical qualities of the beach areas, and the apparent present usage these are recommended for consideration. Of highest priority is the Ocean Trail site #40 because of the connection with the adjacent park area and stream-side trail. This area also has significant safety concerns that should be dealt with in the near future.

ZONE #6: With the dispersed population centers in this zone, it is recommended that sites in both major areas be considered. Shoreline Drive # 42 serves the residents of the Thompson Clark Drive area. In the Deep Bay – Mapleguard Point area, sites # 45 and #46 on Deep Bay Drive both have characteristics that warrant their consideration. The Mapleguard point site # 48 could also be considered. This site has limited parking and is presently used by the Ministry of Transport for a navigation beacon site.
6. PERMIT APPLICATION AND PROCESS

Beach accesses tend to be at the end of dedicated road allowances and come under the jurisdiction of the Ministry of Transportation and Highways (MoTH). Although the beach accesses are public land, MoTH does not inspect or maintain them unless problems with them are brought to their attention. In most cases they do not have a program to enhance them, nor to develop facilities such as trails on them. When neighbourhood residents approach MoTH requesting trails or improvements to beach accesses, MoTH refers people to the Regional District. MoTH will grant a permit to construct facilities within dedicated access to water, to the Regional District. MoTH is not amenable to community groups or neighbours applying for leases or permits.

When the Regional District is approached by the public regarding beach accesses, there is a process staff have to follow.

✔ Staff needs to see evidence of community support for the development or improvements requested. This could be a neighbourhood petition, or information presented to a recreation commission and supported by that commission.
✔ Staff needs to follow up and visit the site, talk to neighbours, assess its suitability as a public facility to be managed and insured under the auspices of the Community Parks function.
✔ Staff consult with MoTH staff to get background on the subject property and to find out if MoTH is amenable to a permit application. Any MoTH plans for future development of the road should also be investigated.
✔ If all the above are favourable, staff prepares a report to the Regional Board outlining the issue and requesting Board’s direction.
✔ If the Board approves a permit application, staff complete the application forms, work with community representatives to prepare a development plan for the property, attach scale maps and submit them to MoTH.
✔ If MoTH approve the application, a permit is issued, the Regional District assumes the liability for the public use on the property, and the improvements can begin.
✔ Permit renewals will be required as the expiry dates approach.
Individual Site Descriptions
Access no: 1  Corresponding # (1980): 180  Name: Larkdown Road, not built beach side of Harness Rd.

Arterial road: Ferndowne Rd. to Harness Rd.

Parking type: Road side  Capacity: 10+ vehicles  Condition: Good

Aspect: N  Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Possible eagles roosts in snags and vets, panoramic view

Hazards: Steep seepage slope 80%+ for 140 meters.

Description: There is a MOTH drainage ditch along bench, connecting to large metal culvert running down slope. R/W partially cleared to bluff edge, slope very wet and heavily vegetated. Backbeach has thick overhanging coniferous and deciduous vegetation and brush limiting beach travel at high water. The beaches along this stretch generally grade from mixed coarse materials in the backbeach to large cobbles and boulders in the lower foreshore. There is a partially developed private access immediately to the south, at the end of Ferndowne Road (Electoral Area G). A rough footpath follows an old road down to the beach level. This access cuts north across the bluff slope and is a private easement (Plan 37567).

Development options: Leave as is for now.

Photos:

View from end of Larkdown Rd.  View of beach end of R/W  Lateral view north
Access no: 2  
Corresponding # (1980): 181  
Name: Loon Rd., not built on beach side of Widgeon Rd.

Arterial road: Larkdown to Harness to Widgeon Rd.

Parking type: Road side  
Capacity: 10+ vehicles  
Condition: Good

Aspect: North N

Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Same as #1

Hazards: Same as #1

Description: Forest vegetated bluff and slope similar to # 1, with restricted beach travel at high water.

Development options: Leave as is for now.

Photos:

![Widgeon Road end of R/W](image-url)
Access no: 3  Corresponding # (1980): 182  Name: Oakdown Rd., not built on beach side of Widgeon Rd.

Arterial road: Same as # 2

Parking type: Road side  Capacity: 10+ vehicles  Condition: Good

Aspect: N  Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Similar to # 1, 2

Hazards: Steep bluff slope

Description: Same as # 2, with the addition of the roadside fence frame between adjacent properties.

Development options: Leave as is for now.

![Bluff forest cover](image2)
Access no: 4      Corresponding # (1980): 183      Name: Tern Rd., not built on beach side of Widgeon Rd.

Arterial road: Widgeon Rd.

Parking type: Road side      Capacity: 10+ vehicles      Condition: Good

Aspect: N      Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Similar to #'s 1-3

Hazards: Similar to #s 1-3

Description: Similar to #s 1-3

Development options: Leave as is for now.

Photos: None
Access no: 5  Corresponding # (1980): 184  Name: Baylis Rd., not built on beach side of Widgeon Rd.

Arterial road: Polegate Rd. to Widgeon Rd.

Parking type: Road side  Capacity: 10+ vehicles  Condition: Good

Aspect: N  Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Similar to #'s 1-4

Hazards: Major bank slump at edge of bluff (6-8 m's in height), steep slopes

Description: Heavily brushed ground to bluff edge; unstable, steep slope (80-100%). Possible restricted movement on beach at high water.

Development options: Leave as is for now.

Photos:

Bank slump

Slope forest cover
Access no: 6  
Corresponding # (1980): 185  
Name: Seal Rd., not built on beach side of Widgeon Rd.

Arterial road: Polegate Rd. then NW along E. and N. railway tracks

Parking type: Road side  
Capacity: 10 + vehicles  
Condition: Good

Aspect: NNE  
Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Similar to #’s 1-5

Hazards: Steep slopes 70 - 80 %

Description: Same as #5

Development options: Leave as is for now.

Photos: None
Access no: 7       Corresponding # (1980): 186       Name: Spearfish Rd.

Arterial road: Boorman Rd. to Widgeon Rd.

Parking type: Road end       Capacity: 2-3 vehicles       Condition: Limited parking space and restricted turnaround area exists at the road end. Private driveway access is located at and near the road end.

Aspect: NNE       Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Potential view site but will require major clearing of large conifers / deciduous for narrow viewscape.

Hazards: 75% slope and scattered danger tree snags (minor)

Description: Road is built approximately 3/4's of the way in from Widgeon Road towards the bluff edge. This accesses two private driveways. The remaining bluff is moderately brushed to the bluff edge. Slope is relatively stable and a switch back trail could be built down to the beach level (difficult building). As with adjacent sites access along the beach may be restricted at high water.

Development options: Leave as is for now.

Photos:
Access no: 8  Corresponding # (1980): 187  Name: Boorman Rd., not built beach side of Widgeon Rd.

Arterial road: Island Hwy.

Parking type: Road side  Capacity: 4+ vehicles  Condition: Congested intersection

Aspect: NNE  Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: Overgrown, follows MoTH drainage ditch to edge of bluff.

Features: Good beach, views, wildlife

Hazards: Steep, unstable slopes

Description: Appears that the R/W is totally within the lower ravine topography. Major slump at bluff edge and the lower creek ravine is moderately steep sided (70%+) and unstable. Last 1/4 of ravine has shallow sloped bottom out to beach. MoTH has erected Danger /Hazard signs at the bluff edge.

Development options: Leave as is for now.

Photos:

![Ravine from 1/2 way down slope](image1.jpg)  ![Slump and ravine slope](image2.jpg)
Access no: 9  
Corresponding # (1980): 188  
Name: Driftwood Rd.

Arterial road: Island Hwy.

Parking type: Road side  
Capacity: 5+ vehicles  
Condition: Limited by grassy shoulder and ditch

Aspect: NNE  
Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: No

Features: Good beach, views, wildlife

Hazards: Steep slope 90%

Description: Private driveway utilizes 1/3 of bluff R/W.

Development options: Leave as is for now.

Photos:

Intersection of Driftwood and Lasqueti Rds.
Shows driveway entrance and R/W

Driveway on R/W
Access no: 10  Corresponding # (1980): 189  Name: Mayser Rd., not built below highway

Arterial road: Island Hwy.

Parking type: Highway  Capacity: 10+ vehicles  Condition: Adequate, but narrow shoulder

Aspect: NNE  Adjacent property: Rural residential

Development status: Partially developed. Heavily brushed in, B.C. Hydro power line R/W, into bluff edge.

Present usage / activities: Unknown

Footpath: No

Features: Good beach views and wildlife

Hazards: Steep bluff slope

Description: Mature conifer stand adjacent to Hydro R/W has minimal understory brush; easy access and trail construction is possible. There is a 5 m. bluff down to the back beach level and 15 m's of light brush out to back beach. Moderate, (normal) trail construction difficulty on slope area.

Development options: No treatment at this time as good access is available immediately north at Alert Rd.

Photos:

Hydro power line on R/W, highway view  Bluff slope just back of beach
ELECTORAL AREA H
BEACH ACCESS INVENTORY 2000

Access no: 11  Corresponding # (1980): 190  Name: Alert Rd.

Arterial road: Island highway

Parking type: Road side (lot)  Capacity: 4 - 5 vehicles  Condition: Good, minor brush

Aspect: NNE  Adjacent property: Rural residential

Development status: Developed  Present usage / activities: Possible car top boat launching, beach activities, swimming, walking and exploring

Footpath: No

Features: Good beach, views, wildlife  Hazards: None evident

Description: This is the first public access west of the Little Qualicum River. Upper beach is sand to mixed fine sediments, and the lower beach is a mixture of larger coarse materials (partially algae covered). Access northwest on the beach is open at high water, while to the southeast it will be restricted beyond approx. 1/2 km. by the backbeach vegetation. The area is not suitable for trailer boat launching due to limited parking and turnaround area (backing in off of highway)

Development options: Install beach access sign and brush NE roadside for additional 2-3 parking spots. Drainage ditch along NE boundary restricts parking expansion size. If brushing leave Sitka Mountain Ash.

Photos:

View from edge of highway

View NW from road end

View back to access R/W

View of boat launch (ramp)
ELECTORAL AREA H
BEACH ACCESS INVENTORY 2000

Access no: 12       Corresponding # (1980): 191       Name: Raft Rd., not built below highway

Arterial road: Island highway

Parking type: Highway       Capacity: 6+ vehicles       Condition: Good

Aspect: NNE       Adjacent property: Rural residential

Development status: Partially developed

Present usage / activities: Unknown

Footpath: Partly brushed in footpath with minor dips, leads to expanded private lawn. The lawn is an encroachment from the adjacent SE property.

Features: Good beach, views

Hazards: Potentially dangerous parking on the highway shoulder (Close to curve)

Description: Similar beach type as Alert Road site # 11. Concrete beach access monument concealed in grass. First half of the R/W is heavily brushed in, with scattered mature conifers. The beach side portion is now a well kept lawn, which extends from the SE boundary to the adjacent property line on the NW boundary. The beachfront has been reinforced with free lying logs to reduce shore erosion. These connect to private reinforcements on the adjacent properties. Easy access is available at this site.

Development options: Leave as is for now. Alternatively, post beach access sign, brush out the footpath and widen tread. Define actual property line to the SE (low priority). Privacy issue for adjacent property owner may be a major concern.

Photos:

View from beach back to R/W
View from highway towards beach
Trail in middle foreground
View from backbeach to trail/highway
Access no: 13  Corresponding # (1980): 192  Name: Crab Road, not built

Arterial road: Island Highway

Parking type: Highway  Capacity: 4+ vehicles  Condition: Narrow shoulder on windy highway section

Aspect: NE  Adjacent property: Rural residential

Development status: Undeveloped

Present usage / activities: None

Footpath: No

Features: Good beach, views

Hazards: Potentially dangerous parking situation on highway

Description: Same beach type as site # 11, Alert Road. The majority of the R/W (60% + ) is heavily brushed in and there is a large low depression occupying 50% of the ground area. Better access opportunities are available close by.

Development options: No development at this time.

Photos:

View from back beach to highway

View from highway to back beach area
Access no: 14  Corresponding # (1980): 193  Name: Lawrence Rd.

Arterial road: Island highway

Parking type: Short road and highway  Capacity: 3 vehicles + hwy  Condition: Small with no turnaround area.

Aspect: N  Adjacent property: Rural residential, west side developed.

Development status: Developed

Present usage / activities: Potential boat launching area (4X4), walking, swimming

Footpath: No

Features: Beach, views, possible wildlife

Hazards: Backing out into highway traffic, highway parking

Description: This access is the location for a community mailbox and provides access to a private driveway. There is also a gated access road on the east side. The gate is approx. 3 meters onto the R/W. Half of the back beach is rock reinforced and the other portion may provide 4X4 access to the beach.

Development options: Post beach access sign. It may be possible to brush out moderate to heavy brush for 2 additional parking spots or to improve turnaround capability. No development at this time.

Photos:

Highway view of access  Beach view of access and boat launch ramp

Gate and brush
Access no: 15  
Corresponding # (1980): 194  
Name: Cochrane Rd.

Arterial road: Island highway

Parking type: Highway and road side  
Capacity: 10+ vehicles  
Condition: Good

Aspect: N  
Adjacent property: Rural residential on the west; Qualicum Indian Reserve on the east boundary.

Development status: Partially developed

Present usage / activities: Shellfish harvesting, beach party site (curtailed by adjacent property owner), possible boat launch site (car top or 4X4). Most use is from local residents.

Footpath: 4X4 road to beach  
Features: Beach, views, wildlife, shell fish

Hazards: Low priority danger tree (snag), boat trailer backing in off the highway.

Description: Easy foot access to beach area. Site has a community mailbox and bus shelter located on the R/W. Extensive depressed lowland back of the beach, this is no problem for access but may become a moist area in the wet seasons. The backbeach of the 1st Nations property has been extensively reinforced with large concrete blocks. Beach area is composed of mixed fine sediments and a sandy backshore

Development options: Post beach access sign. Fill road depression for improved vehicle access for boat launching.

Photos:

View from Cochrane road (access via right opening)

Beach, backbeach and R/W  
Blocked access, private fence in shade-left, depression beyond log barrier
Access no: 16  
Corresponding # (1980): 194a  
Name: Island Highway

Arterial road: Island highway

Parking type: Highway  
Capacity: 15+ vehicles  
Condition: Narrow shoulder, dangerous

Aspect: N  
Adjacent property: Rural residential and commercial

Development status: Undeveloped

Present usage / activities: Clam digging, walking, swimming, beach activities

Footpath: No

Features: Tidal flats, beach, views

Hazards: Proximity to highway, steep rip rapped bank down to beach, dangerous highway parking

Description: Beach similar to #15. Generally difficult access down through the boulders to beach level. Crossing the highway from parking shoulder can be dangerous. Good beach for exploration, but it is better accessed from adjacent access sites.

Development options: None at this time

Photos:

Riprap reinforced bank  
Long view of beach
Access no: 17  
Corresponding # (1980): 195  
Name: Baywater Rd.

Arterial road: Island highway

Parking type: Road side / highway  
Capacity: 4 + hwy  
Condition: Good, minor grass

Aspect: N  
Adjacent property: Commercial

Development status: Partially developed

Present usage / activities: As for # 16. Possible 4X4 boat launch (steep and sandy at top)

Footpath: No

Features: Views, rough boat launch

Hazards: Backing off highway with a trailer will interrupt traffic flow on the highway.

Description: Adjacent properties are a trailer park and a motel, both of which are developed up to the property lines. The boat launch is rough but usable, better launch facilities are available at Sunnybeach site 1Km. north. Minor grass cutting will improve parking within access R/W. Travel along the beach will be restricted at high water.

Development options: Post beach access sign and do minor grounds keeping.

Photos:

View from hwy to beach

Boat ramp

Boat ramp
Access no: 18  Corresponding # (1980): 196  Name: Sunnybeach Rd.

Arterial road: Island highway

Parking type: Lot  Capacity: 6 - 8 vehicles +  Condition: Good

Aspect: E  Adjacent property: Residential

Development status: Developed

Present usage / activities: Boat launching, picnicing, beach activities

Footpath: No

Features: Good beach, tidal flats, views, boat launch, toilet, picnic tables

Hazards: None evident

Description: The Reg. District has a MoTH "Lease of Occupation" for this access site, which expires April 30, 2001. Backbeach and foreshore are mixed fines and sand making for an excellent beach, which stretches at least to Nile Creek. Access in both directions along the beach is available. Development includes; gravel parking area, a rough boat launch, 3 picnic tables, a portable toilet and community mailbox. The area receives regular use from locals as well as travelers.

Development options: Regular grass cutting is required to maintain quality experience and easy access to the picnic tables. The picnic tables are in need of staining to help preserve the wood. Monitor the condition of the tables on a regular basis. No access sign is required, as it is obvious.

Photos:

Improvements to the parking area, and installation of toilet facilities was undertaken in 1999.
Access no: 19  
Corresponding # (1980): 197  
Name: Franksea Road, not built

Arterial road: Island highway

Parking type: Highway  
Capacity: 10-15 vehicles  
Condition: Fair, muddy sections and grassy shoulder

Aspect: E  
Adjacent property: Residential

Development status: Developed

Present usage / activities: General beach activities, mainly local residents.

Footpath: New path built 1999. Well surfaced and defined  
Features: Good beach, views, wildlife

Hazards: Highway parking in the vicinity of a blind corner

Description: A MoTH "Permit to Construct" is held by the RDN for this site. The footpath is through standing timber and brush out to the backbeach. The backbeach is covered with large beach logs, easy access through this section. Beach and access similar to # 18. The information sign is concealed within the standing timber foliage.

Development options: Post easily visible beach access sign. Carry out or have local community group do minor weeding of tread and brushing of footpath buffers. Replace tread border wood with larger logs and stake in place. Cut opening through back beach logs for better access. Contact MoTH to request shoulder-parking area graded and widened to make for safer parking (not supported by MoTH at time of trail development due to safety concerns).

Adjacent property: Residential

Development status: Developed

Present usage / activities: General beach activities

Footpath: Narrow, good quality path with 2 foot bridges. The path provides good access to the backbeach.

Features: Good beach, views

Hazards: Danger tree (Maple) adjacent to trail head

Description: This access is a narrow lane R/W 10 feet in width. It is well defined by a fence and hedge for most of its length. The adjacent property to the north may be encroaching into the R/W just back of the 2nd footbridge. The footbridges are in good, safe condition. Local residents are maintaining the trail. The beach is mainly mixed fine deposits with some algae covered areas at the lower foreshore. Use is mainly by local residents.

Development options: Widen the start of the footpath (minor brushing). Move some beach logs to improve access through the backbeach area (low priority). Post Beach access sign.

Adjacent property: Residential

Development status: Partially developed

Present usage / activities: Beach activities, marine life observation (tidal pools), bird watching

Footpath: Short, rough path (5 m long) at south side; easy direct access at the north side of R/W.

Features: Good beach, views, wildlife, various bird species, tidal pools

Hazards: Eroding road bank 1 m. in height at back beach

Description: The road does a 270-degree loop down from the bluff to end up parallel to the beach. This road provides access to both beach level houses on adjacent properties. Two pullouts have been built on the high side of the road to accommodate parking for 4 vehicles. The beach side road bank (2 m's in ht.) is rip rapped for approximately 20 meters to prevent increased bank erosion; an additional 20 m's are not protected. The beach is similar to previous accesses. Tidal pools at low tide provide areas for marine biological observation. Extensive seasonal use by various bird species (eagles, hawks, loons ++). The upper portion of the R/W is an undeveloped lot on Mapleguard Drive.

Development options: Post access sign at Mapleguard intersection, brush out area for extra parking spots (2-3), and riprap unprotected bank.

Photos:

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: Narrow footpath leads to the bluff edge, from there down to beach level there is a steep windy "goat" trail. This trail is located on the adjacent private property. Slope 70-85%.

Hazards: Steep slope  
Features: Beach, views, wildlife, eagles

Description: Travel along the beach will be severely restricted at high water by overhanging deciduous trees and brush. Similar beach characteristics to adjacent accesses.

Development options: Leave as is for now. The construction of stairs down the bluff slope may be considered as a future option. Overall vertical height for stairs is approximately 8 meters.

Photos:

Roadside parking and R/W entrance  
Bluff slope down to beach  
Backbeach vegetation cover
Access no: 40  Corresponding # (1980): 218, 219  Name: Ocean Trail, east end

Arterial road: Island Highway to Jamieson Road to Bald Eagle Crescent to Blue Heron Drive

Parking type: Lot / Road side  Capacity: 4 + 3 vehicles  Condition: Good

Aspect: NNE  Adjacent property: Residential

Development status: Developed

Present usage / activities: Bird watching, hiking and general beach activities

Footpath: A trail of variable width and slope leads to the backbeach area. The upper portion of the trail runs along the top of the creek ravine. It has exposed, steep side slopes (80-100%), exposed roots and an extreme tread outslope. These are all potential safety hazards. The lower sections; are lightly brushed in, have muddy or rutted sections, and have improvised wooden steps. At the ravine section there is a steep "goat" trail that switchbacks down to the creek edge below. This is a very unsafe access route for the unaware. The creek is also accessible by way of a wide, level trail from the bottom of the main beach access trail. At the creek, there is a narrow path that leads along the creek bank for an unknown distance. A section of this is along an eroded creek bank. The trail is becoming brushed in and has some windfalls crossing it.

Features: Views, eagles, creek trail, community park (potential), beach

Hazards: Steep side slopes on main trail, creek trail too close to creek, vertical bluff at back of upper park area

Description: The upper open area is a MoTH R/W and could be incorporated as a community park. It is a pleasant grass area and appears to be maintained by the adjacent property owners. There is excellent viewing potential from this upper vantagepoint. It will require considerable tree falling, topping and limbing to open up this view. The tree removable may destabilize the bluff slope. Excellent viewing is available from the beach. The backshore is mainly gravel, while the foreshore is mixed coarse materials with large rocks. The subtidal areas are composed mainly of sand.

Development options: Post an access sign at the Jamieson Road intersection. Upgrade main trail by improving tread surface and slope, brushing out narrow sections, installing guard rails and replacing stairs (stepping stones or wood). The switchback trail down to the creek should be blocked and the slope rehabilitated. The creek trail requires tread relocation back from creek edge, overall tread widening, brushing and clearing. A long term project would be to complete the trail right through to Blue Heron Drive. Assessment of local community interest and willingness to participate will be required if upgrading and expansion of these resources is to be undertaken.

Arterial road: Island Highway to Jamieson Road to Bald Eagle Crescent to Blue Heron Drive

Parking type: Road side  Capacity: 5+ vehicles  Condition: Narrow grassy shoulder

Aspect: NE  Adjacent property: Residential

Development status: Undeveloped

Present usage / activities: Unknown

Footpath: Narrow path across upper R/W to Thompson Clark Drive. No access to the beach area.

Hazards: Moist, slippery ravine slopes

Description: The R/W consists of a heavily brushed and treed creek ravine (50-75% slope). There are many wet seepage areas throughout the ravine side slopes. The upper half of the R/W length includes a dry flat bench on the north side, but the lower portion appears to be totally within the ravine. An old overgrown trail meanders through the upper bench then disappears into the adjacent private property. The edge of the bluff has steep slopes down to the backbeach area. Beach is similar to previous site.

Development options: Leave as is until demand increases. Ascertain exact NE property line for potential trail location.

Photos:

Road view /parking area  Footpath  Ravine cross slope view out to beach area
Access no: 42    Corresponding # (1980): 221    Name: Shoreline Drive

Arterial road: Island Highway to Gainsburg Road to Kopina Drive to Longview Drive to Seaview Drive

Parking type: 2 Lots / Road side    Capacity: 7+ vehicles    Condition: Lot is good; roadside is of variable width and grassy.

Aspect: N    Adjacent property: Residential

Development status: Partially developed    Present usage / activities: Viewing and general beach activities

Footpath: Narrow, brushy path at south parking lot. Rock steps (loose and unstable) have been incorporated. There are other very basic, steep, and overgrown paths accessing the beach along this Shoreline Drive R/W.

Hazards: 2 large Douglas fir snags (wildlife trees) located along roadside. Drop offs along back beach.

Features: Beach, views, wildlife, eagles

Description: For the entire length of the R/W there is a variable height (1-3 M's) drop off at the extreme backbeach edge. The bank at the parking lot area has been rip rapped for bank stabilization. Approximately 75 m's north of this area there is a low bank which could provide easier access to the beach. At 125 and 175 m's from south parking area, there are rough access paths to the beach area. The northern parking lot has no immediate access. People are probably using a cleared ramp on the adjacent property to access the beach area. The back beach in this area is heavily brushed in and has a 2 m bluff edge. Side movement on the upper beach area will be restricted at high water by the extensive overhanging vegetation. The beach in this area is composed of mixed coarse deposits, which are partially covered with algae.

Development options: Improve existing footpath at the southern parking lot area. Upgrade the other beach access paths with cross slope footpath (2) or the installation of fixed stairs (2). Improve roadside parking in the related areas (grading to level and remove grass cover). Determine exact north boundary for potential access path. Post a beach access sign at the Gainsburg intersection.

South beach area, east view  Point area with view south west
Access no: 49  
Corresponding # (1980): 228  
Name: Burne Road

Arterial road: Island Highway to Gainsburg Road

Parking type: Large lot

Capacity: 40 vehicles

Condition: Good

Aspect: W

Adjacent property: Commercial

Development status: Developed

Present usage / activities: Parking lot for wharf access

Footpath: No

Features: Federal Habourmasters office, public washrooms

Hazards: Steep bank leading down from parking area

Description: The majority of the land area is under the administration of the Small Crafts Authority (Govt. Of Canada). Negotiations are ongoing with MoTH for transfer of title to the Federal Government. There is still a narrow, brushy MoTH R/W on the south side of the parking lot. It is between the parking lot and the adjacent private boat launch.

Development options: Leave as is.
