Allow rooftop solar energy systems to exceed the maximum permitted building height by 0.6 m.

On parcels less than 5,000 m², the height exemption is limited to 50% of the width of the roof.

For larger parcels, there are no roof coverage limits.

Note: Diagrams not to scale.
Allow one over-height micro wind turbine system per parcel (1kW capacity or less) up to twice the maximum permitted building height and with a minimum setback equal to the height of the system, and 60 m setback from any eagle or heron nesting tree.

**Proposed Changes to Zoning Bylaw 500**

**Electoral Area ‘A’ ‘C’ ‘E’ ‘G’ and ‘H’**
Amend the definition of floor area to allow thicker walls without restricting livable floor area and to exclude overhangs from the floor area calculation.

Proposed Changes to Zoning Bylaw 500

Electoral Area ‘A’ ‘C’ ‘E’ ‘G’ and ‘H’
Allow rooftop solar energy systems to exceed the highest point of the roof by 1.0 m.

On parcels less than 5,000 m², the height exemption is limited to 50% of the width of the roof.

For larger parcels, there are no roof coverage limits.
Micro Wind Turbine Systems

Allow one over-height micro wind turbine system per parcel (1kW capacity or less) up to twice the maximum permitted building height and with a minimum setback equal to the height of the system, and 60 m setback from any eagle or heron nesting tree.

Figure 5: Setback from Eagle or Heron Nesting Tree

Figure 6: Height and Setback for a Freestanding Micro Wind Turbine System

Figure 7: Height and Setback for a Micro Wind Turbine System Affixed to Side of Building

Note: Diagrams not to scale.
Allow one over-height small wind turbine system per parcel (1kW to 10 kW capacity) with a maximum height of 30 m and a minimum setback equal to the height of the system, and 100 m setback from any eagle or heron nesting tree.
Amend the definition of floor area to allow thicker walls without restricting livable floor area.

**Bylaw 1285**

**Passive Design Features**

(Super Insulation)

**Figure 11:** Diagram of Floor Area Calculated with Proposed Definition

Note: Diagrams not to scale.
Allow rainwater harvesting structures up to 2 m in height and up to 4,546 L in capacity within the required minimum setbacks.

Figure 12: Setback Exemption for Rainwater Harvesting Structures, Equipment and Apparatus
**Board Policy B1.5** “Development Permit Variance Permit, Development Permit with Variance & Floodplain Exemption Application Evaluation Policy” to be updated to include consideration of variances relating to green building features, systems and technologies as follows:

In cases where renewable solar or wind energy systems, or rainwater harvesting systems result in a building exceeding maximum height restrictions or encroaching into a setback area, a height variance or setback variance may be considered acceptable.
Bylaw 500 (Electoral Area A, C, E, G, H)
